

Hanna Boychenko

Technical Project Manager | Web3, Blockchain & AI

Email: hanna.boychenko@gmail.com | LinkedIn: linkedin.com/in/hannaboychenko

PROFESSIONAL SUMMARY

Technical project management professional with 13+ years in IT, including 5+ years in project management and product operations, experience in two Web3 companies, and 7 years of hands-on Web2 software development. Coordinates Web3, blockchain, digital asset, AI, fintech, and software delivery initiatives across distributed teams.

Strong at translating business needs into realistic technical delivery plans, managing scope, timelines, resources, risks, dependencies, and stakeholder communication. Works closely with engineering, product, design, analytics, compliance, legal, finance, vendors, and leadership to keep delivery transparent and moving.

CORE SKILLS

Crypto/Web3: Crypto project delivery, Web3 delivery, blockchain product delivery, Web3 integrations, NFT / token feature coordination, digital asset products.

Delivery: Technical delivery, release management, requirements management, process design, scope and timeline management, resource coordination, risk and dependency management.

Leadership: Stakeholder communication, leadership reporting, budget management, OKR alignment, vendor coordination, cross-functional collaboration, product discovery, presale.

Tools: Jira, Confluence, Miro, Notion, Trello, Shortcut, ZenHub, GitLab, Bitbucket, Figma, Draw.io, Sketch, Instagantt, MS Office, MS Excel.

Methods: Agile, Scrum, Kanban, Scrumban, Waterfall, T&M, fixed-price.

PROFESSIONAL EXPERIENCE

NDA - Project Manager

Feb 2025 - Present

- Lead end-to-end delivery coordination across concurrent Web3, blockchain, and AI initiatives in a distributed product environment.
- Turn business goals and technical inputs into delivery plans, ownership maps, milestones, release readiness criteria, and executive-level status reporting.
- Coordinate engineering, product, design, analytics, compliance, legal, and finance stakeholders across complex cross-team dependencies.
- Introduced structured planning, risk and dependency tracking, and recurring reporting routines that made ownership, blockers, and delivery status more visible.
- Drive critical-path issues to resolution by clarifying decisions, escalating risks early, and following deliverables through release.
- Support requirements definition, prioritization, capacity planning, budget tracking, and OKR alignment while keeping delivery plans realistic.

VBGL - NDA - Project Management Officer

Feb 2024 - Jan 2025

- Coordinated delivery across multiple Web3, crypto, and digital asset initiatives, from planning and requirements alignment through release follow-up.
- Established consistent planning, status reporting, meeting follow-ups, and risk and dependency tracking across active workstreams.
- Connected technical and business stakeholders, translated priorities into actionable plans, and surfaced delivery trade-offs early.
- Balanced scope, timelines, resources, budgets, and cross-team dependencies while maintaining visibility for leadership.
- Reviewed deliverables against agreed requirements, coordinated issue resolution, and helped teams reach release readiness under changing priorities.

Fively - Project Management Officer, Product Manager, Presale Lead

Nov 2020 - Jan 2024

- Managed multiple software projects at different stages with both T&M and fixed-price delivery models.
- Connected project management, product discovery, and presale work to improve delivery quality and client alignment.
- Prepared plans, roadmaps, status reports, meeting notes, and delivery documentation.
- Handled risks, resource allocation, budgets, ceremonies, quality reviews, and one-on-one sessions with team members.
- Processed 90+ RFPs and shaped solution approaches for clients across several domains.

TECHNICAL BACKGROUND

ITechArt - Software Developer

Nov 2017 - Oct 2020

- Built production software in .NET and JavaScript environments, including React.js and Node.js.
- Contributed to architecture discussions, code structure, and engineering collaboration.
- Gained practical experience working inside teams of different sizes, including large delivery teams.

Andersen - Software Developer

Jul 2015 - Nov 2017

- Worked on .NET, JavaScript, and Go projects.
- Designed application architecture and supported code organization.
- Collaborated with Polotsk State University on development courses aimed at identifying strong students.

Polotsk State University - Software Development Teacher

Aug 2015 - Nov 2016

- Taught software development courses with theory and lab work.
- Coordinated first-year students and supported thesis project management and quality control.

Riftek - Software Developer

2013 - Jun 2015

- Designed and developed a database for storing and organizing information about components used in 3D scanners.
- Built an application that enabled users to query the database and maintain records for those components.

PROJECT TYPES

Blockchain-enabled products, Web3 products, crypto platforms, digital asset products, NFT / token feature discovery, AI products, fintech platforms, and B2B SaaS products. Client and product details are protected by NDA.

EDUCATION AND CERTIFICATIONS

- Google Project Management Certificate (2023-2024)
- BA Courses by MyMonday (2020)
- PM Courses by MyMonday (2020, 2022)
- UX/UI Courses by TeachMeSkills (2020)
- Bachelor's Degree in Software Engineering, Polotsk State University (2010-2015)
